

Anirudh Chandan

☎ +91-9760455011 | ✉ anichandan124@gmail.com | in [Linkedin](#) | [Github](#) | </> [Leetcode](#)

Software Engineer (2+ yrs) with **strong CS fundamentals** and proven coding across **Java, Python, JavaScript, and C++ (450+ LeetCode)**. Experienced building **scalable, distributed systems** — real-time pipelines, high-throughput services, and a database engine from scratch — across the full stack on AWS/GCP. Self-driven and curious, with a focus on performance, architecture, and engineering quality.

EXPERIENCE

DOCPLIX

Software Engineer

Remote

Nov 2025 – Present

- Led the design and delivery of **30+ scalable REST APIs**, executing a zero-downtime migration with **100% data integrity**.
- Architected a **distributed**, push-based event system using **WebSockets** and **Redis Pub/Sub**, replacing legacy polling and reducing backend traffic by **80%**.
- Implemented **optimistic concurrency control** and distributed **Redis locks** to eliminate race conditions across concurrent services.
- Enforced **RBAC** + rate limiting and reduced record-retrieval latency by **40%** through indexing and SQL query execution-plan optimization.

GENPACT

Software Engineer (Promoted from Intern)

Bengaluru, India

Feb 2024 – Oct 2025

- Engineered an idempotent **Kafka** ingestion pipeline guaranteeing **exactly-once** processing across **distributed** partitions during network failures.
- Developed resilient **Python (Flask) microservices** with automated retries and Dead Letter Queues, serving 24 modules with zero data loss.
- Integrated structured logging and **distributed tracing** across serverless services on **GCP**, reducing production MTTR by **40%**.
- Optimized high-volume ingestion via multipart uploads and presigned S3 URLs, removing backend memory bottlenecks.

PROJECTS

PYDB: DATABASE ENGINE FROM SCRATCH

[GITHUB](#)

Python, Data Structures, Algorithms, Systems, ACID

Built a disk-based transactional database engine in **pure Python** from scratch: custom **8KB paging**, a **dual B-Tree** index achieving **0.29ms reads**, and an ACID-compliant **Write-Ahead Log** for crash recovery. A deep dive into **data structures, algorithms**, and low-level systems design.

PROJAUTO: FULL-STACK PLATFORM AT SCALE

React, Java, Spring Boot, MySQL, Redis

Top contributor (**180+ commits, full-stack**) on a multi-tenant platform of 120+ services and 220+ entities (React + Spring Boot). Drove **architecture and performance**: eliminated **N+1 queries** across 53 endpoints (15.6s → 2.4s), and added a distributed token-bucket rate limiter, Redis caching, and multi-tenant RBAC.

NEXUS CHAT: SCALABLE REAL-TIME SYSTEM

[GITHUB](#)

Node.js, PostgreSQL, Redis, BullMQ, System Design

Designed a scalable backend (**PostgreSQL** + **Redis**) applying **HLD/LLD** for high throughput: a **BullMQ** queue decoupling ingestion from DB writes, a **write-behind cache** cutting writes by **99%**, and Postgres **range partitioning** for scalable historical reads.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C++, SQL, Bash

CS Fundamentals: Data Structures & Algorithms, System Design, Distributed Systems, OOP, Design Patterns

Backend: Node.js, Express.js, Flask, Spring Boot, REST APIs, Microservices

Frontend: React, Tailwind CSS, React Query

Cloud & Data: AWS (EC2, S3), GCP, Docker, Kafka, Redis, PostgreSQL, MongoDB, MySQL

Tools: Git, CI/CD

EDUCATION

GRAPHIC ERA UNIVERSITY

B.Tech. in Computer Science and Engineering; CGPA: 9.11

Dehradun, India

July 2020 – July 2024

ACHIEVEMENTS

- **Competitive Programming:** Solved **450+** algorithm and data-structure problems on LeetCode, demonstrating exceptional coding skills and complexity analysis.
- **Open Source:** Merged pull requests for core API development in Node.js ecosystem projects during Hacktoberfest.
